II. RESEARCH AND SCHOLARSHIP

Research Interests

The research in my group focuses the design, synthesis, and fundamental physico-chemical properties of low-dimensional quantum materials, including materials for semiconductor quantum devices that exhibit correlated degrees of freedom (charge, spin, plasmon and

exciton, phonon etc.). My group uses a unique combination of spectroscopic, magneto-optical, and magnetic techniques together with theoretical modelling to quantitatively investigate the principles governing the coexistence of and interactions between different functional properties of materials of reduced dimensions.

Involvement in Curriculum Development

I have developed six new courses in the Department of Chemistry and Nanotechnology Engineering program and taught them for the first time: Electronic Structure and Properties of Bulk and Nanoscale Materials (CHEM 452), Surfaces and Interfaces (NE 352), Fundamentals of Nanotechnology: Nanoscale Surfaces and Interfaces (NANO 701) and Spectromicroscopy (NANO 702), Structure and Spectroscopy of Nanoscale Materials (NANO 602), Electronic Structure and Properties of Materials (CHEM 750). As a part of the interdisciplinary undergraduate Nanotechnology Engineering program I proposed the initial laboratory exercises for third year undergraduate students, and advised Teaching Assistant/Laboratory Coordinator during the lab development and the preparation of the handout material.
